

RIPE NCC
RIPE NETWORK COORDINATION CENTRE

Learning to use RIPE NCC's Tools for Network Operators

Tutorial

9 October 2019 - LACNIC32 / LACNOG 2019 - Panama

Before starting...

- Have you filled out the attendance form?
 - You're helping us a lot into getting to know our attendees!

Form

Troubleshooting

How to find information on what happened

Monitoring

Create measurements to detect changes

Integration with your tools

Make use of the created measurements to generate alarms

Troubleshooting

Section 1

What happened?

Exercise 1

- You work in a NOC of a big company with:
 - ASN **4725**
 - Prefix: **202.33.0.0/16**
- On the **23/09/2019**, right after 8:30 AM there are 100 emails complaining about connectivity problems to your web site in the IP **202.33.14.5**
- The **DNS** admin checked that the service is **OK**
- The **Web** admin checked that the service is also **OK**

- What can you do?
- Go to <https://stat.ripe.net> and try to find out
- Any change in the announcement of your prefix?
- Any other ASN announcing (part of) your addresses?
- Can you find information about the “attacker”?

Conclusions

Another AS hijacked part of my address space

- Different actions to be taken:
 1. Contact the AS announcing my addresses
 2. Announce same/more specifics too
 3. Move the service to another “safe” IP
 4. Create Monitoring measurements

RIP Estat

Section 1

What is RIPEstat?

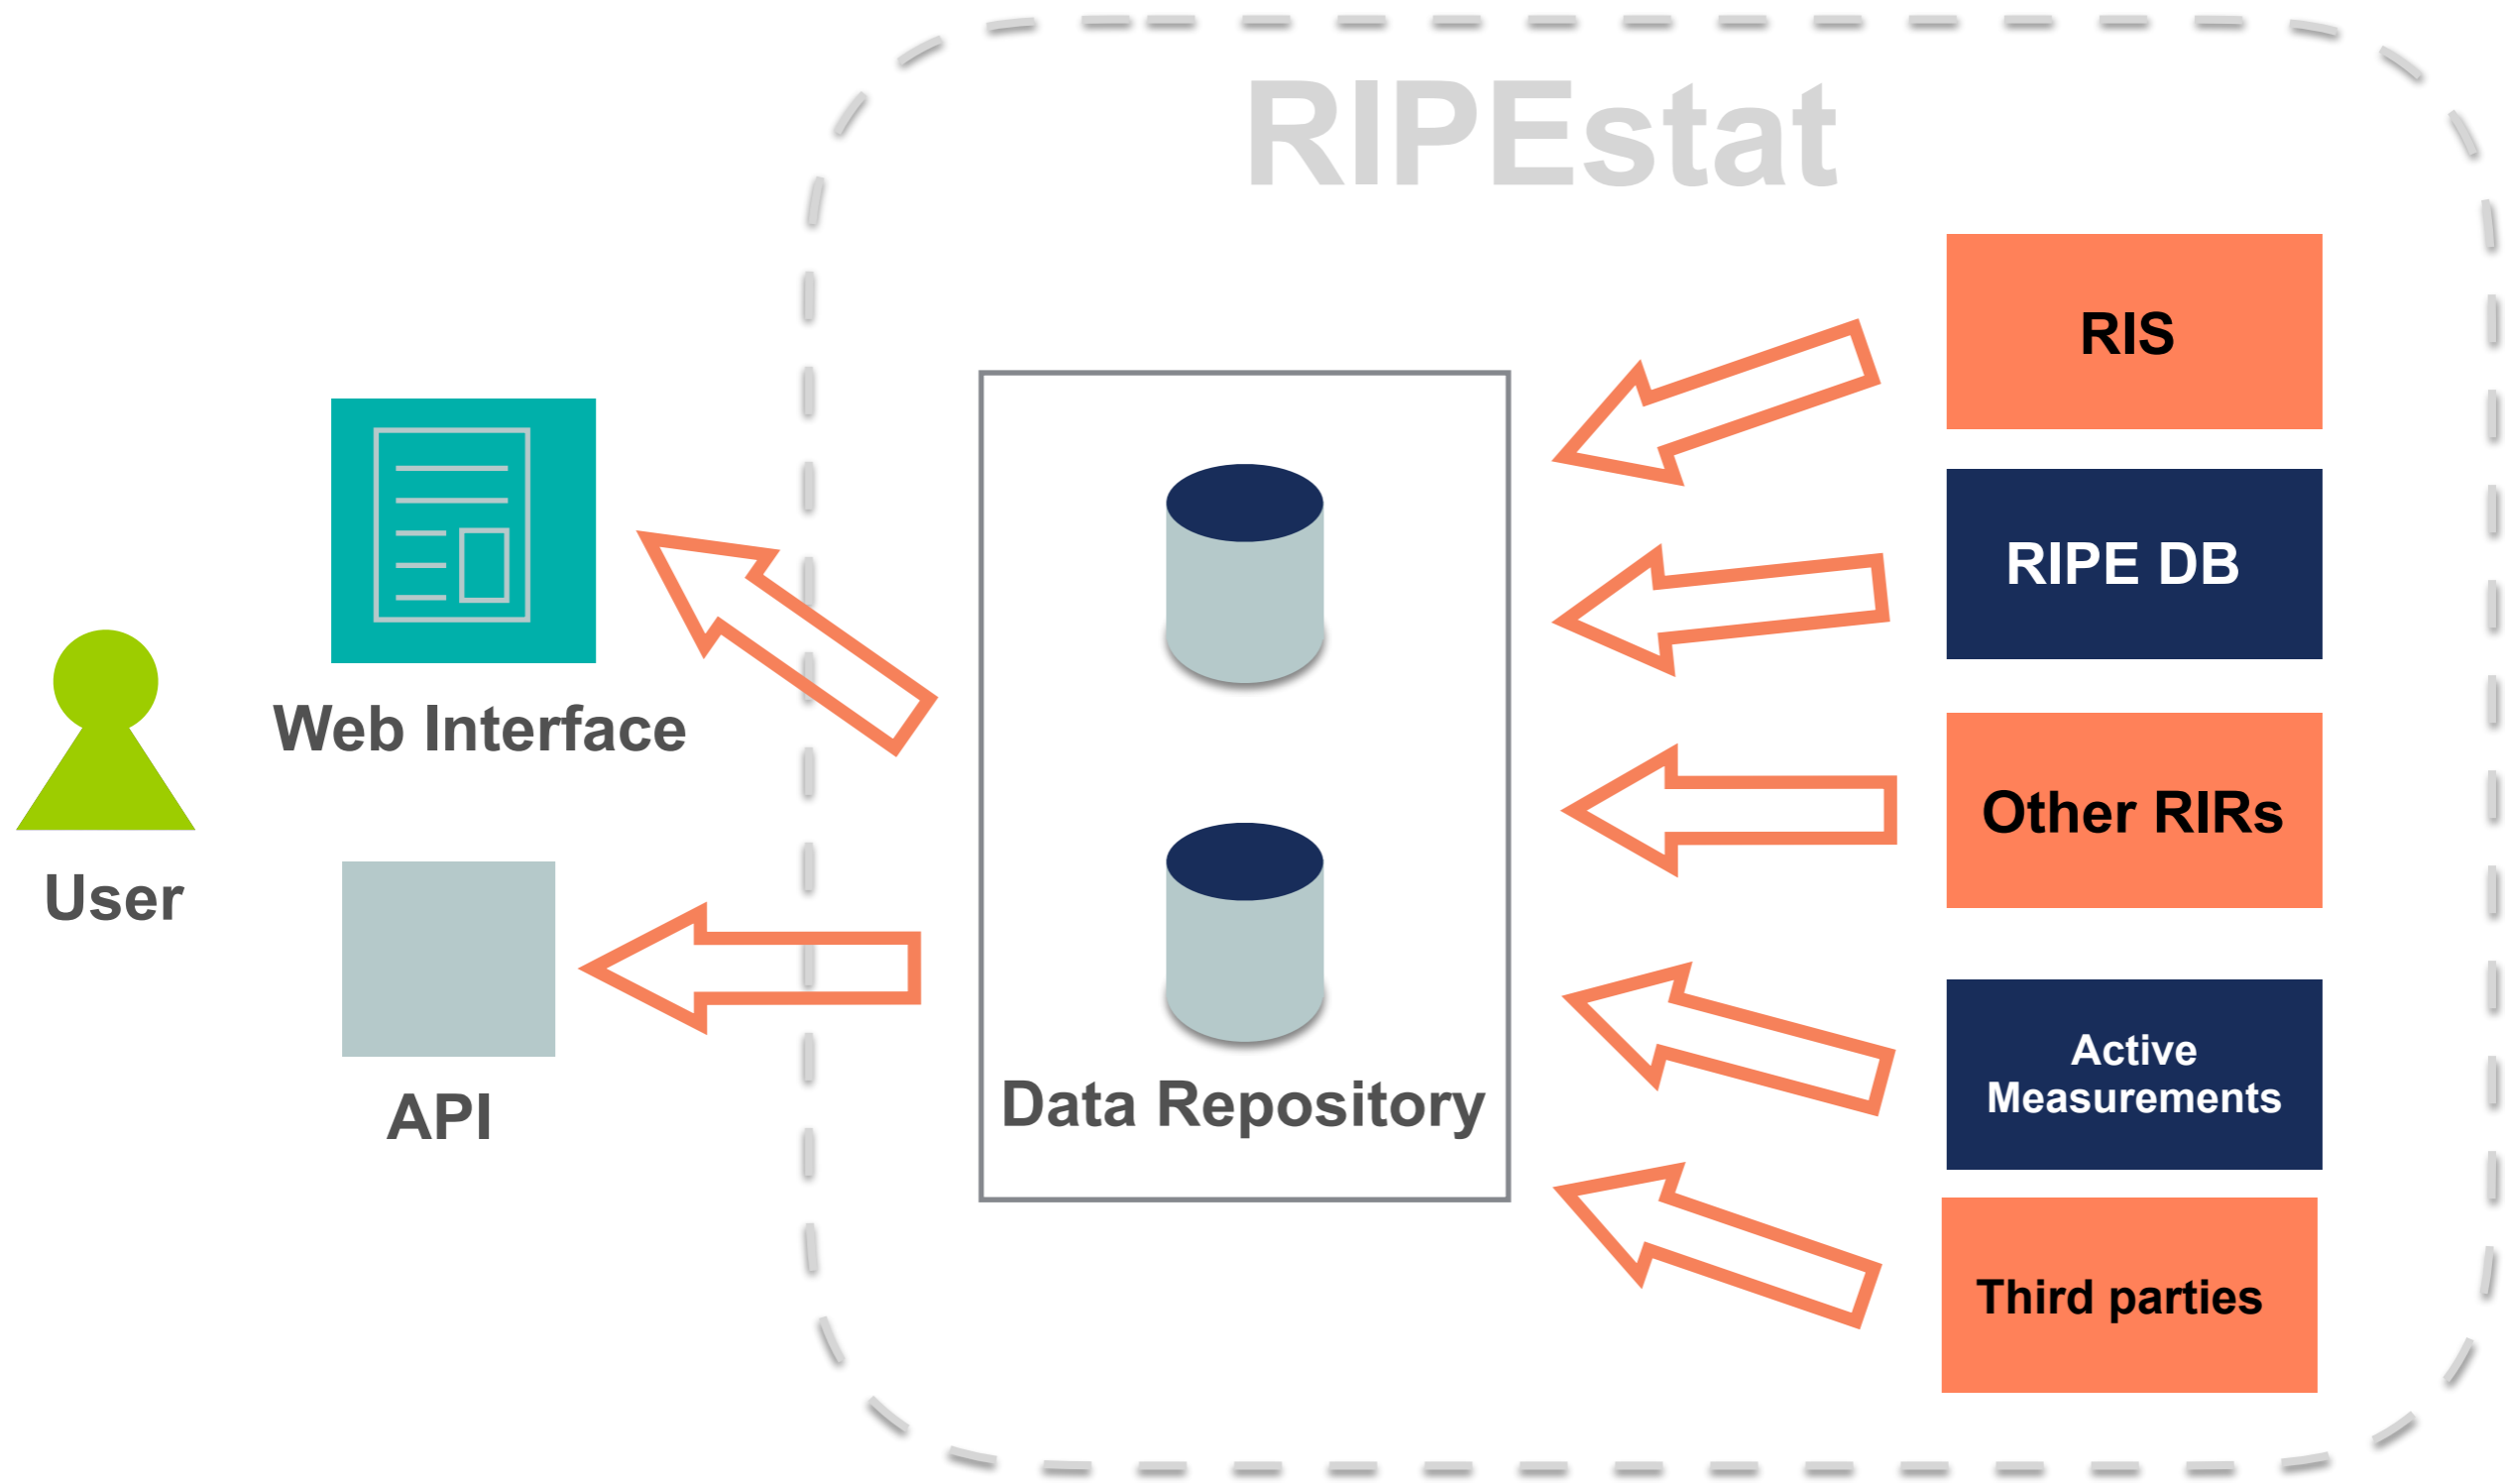

One interface for Internet data and statistics

“One-stop shop”

RIPE NCC
RIPEstat

What data? What sources?

- RIPE Database
- Other RIR data
- BGP routing data (RIS)
- Active measurements (RIPE Atlas, DNSMON)
- Geolocation (third party)
- Blacklist data (third party)
- More...

RIS - Routing Information Service

- RIPE NCC collecting BGP information since 1999

- Raw data: ris.ripe.net

- 20+ route collectors
900+ peers

- RIS data visualised in:

- RIPEstat

- RIS Live (ris-live.ripe.net)

Why use RIPEstat?

	Historical Information
	Info about your/other's network
	Easy to share
	Easy to embed
	Several interfaces: Web and API

Query Types

- IPv4 and IPv6 address/prefix
- ASN
- Hostname
- Country code

RIPEstat Interfaces

- Web interface

<https://stat.ripe.net>

- RIPEstat widget API

- RIPEstat data API

Get the data behind the widget!

source data embed code permalink info

Get the data behind this widget with the Data API

<https://stat.ripe.net/data/allocation-history/data.json?resource=AS3333>

```
{
  "cached": true,
  "data": {
    "query_endtime": "2014-08-06T00:00:00",
    "query_starttime": "2000-01-01T00:00:00",
    "resource": "3333",
    "results": {
      "IANA": [
        {
          "resource": "0-65535",
          "status": "IANA",
          "timelines": [
            {
              "endtime": "2007-10-11T00:00:00",
              "starttime": "2007-10-11T00:00:00"
            },
            {
              "endtime": "2008-11-03T00:00:00",
              "starttime": "2007-10-27T00:00:00"
            }
          ]
        }
      ]
    }
  }
}
```

Shareable results URL

- Immutable shareable URL for each result!
- URL includes:
 - **widget** + queried **resource**
 - for some widgets: **settings**, **zoom**, **time period**

Where's the data from?

source data embed code permalink info

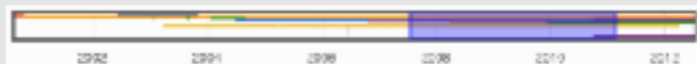

Content Explanation

What does this widget show?
Allocation History displays information about allocations and direct assignments of prefixes or AS numbers.

How can the visualisation be interpreted?
When the queried resource was a prefix, the graph will show how that prefix and related (more or less specific prefixes) were allocated over time. When the queried resource was an ASN, the graph will show the allocation of that ASN.
The legend will display all resources, including those which are not announced during the time range displayed. It is possible to change the displayed time period with the timeline selector underneath the graph.

The shaded area is displayed in the graph. This area can be adjusted by moving to the left or right end of the shaded area and then dragging it to the desired location. It is possible to change not only the start and end time, but also the length of the period which is shown.

What is the data source?
The RIR statistics files summarize the current state of allocations and assignments of Internet number resources. They are intended to provide a snapshot of the status of Internet number resources, without any transactional or historical details. Find details for each RIR here:

- APNIC
- APNIC
- ARIN
- LACNIC
- RIPE NCC

Freshness and timescale of the data

- Timestamp and time period
- Different widgets = different update frequency
- Adjustable usually
 - Limits: different maximum granularities

Widgets List

<https://stat.ripe.net/widget/list>

RIPEstat Widgets

This is a complete list of all of the widgets that RIPEstat offers. Each of these widgets can be accessed using the links below.

When you view a widget you can also get code for **embedding** it in your own pages. The full procedure for embedding and configuring widgets is described in the [Widget API Documentation](#).

Monitoring

Section 2

How to detect problems

Exercise 2

After the incident, **you move the service to another IP: 202.33.33.53**

You decide to use RIPE Atlas to monitor the service to detect problems:

- Check delays from 5-10 places in Japan (ping)
- Check paths from 5-10 places in Japan (traceroute)

You need...

- **RIPE NCC Access Account** (access.ripe.net)
 - Create one if you don't have it yet
- **Credits:** Every measurement has a cost in credits
 - Why? Fairness and avoid overload
 - How to earn credits?
 - Hosting a probe / anchor, Being an RIPE NCC member (LIR), Being RIPE Atlas sponsor, Transfer, **Voucher**

LACNIC 32 / LACNOG 2019 voucher

- Go to RIPE Atlas (atlas.ripe.net)
 - Login using your RIPE access account
 - My Atlas (left menu)
 - Credits
 - Redeem voucher

The voucher! :-) **LACNIC32PANAMA**

Exercise

- Go to <https://atlas.ripe.net>
- **Login** with your access account
- “Measurements, Maps and Tools”
- “Measurements” -> 
- New Measurements:
 - Run for **5 days**, 5-10 probes in **Japan**, target **202.33.33.53**
 1. Create a **ping** measurement
 2. Create **traceroute** measurement

Conclusions

You have two measurements running towards your monitored service

RIPE Atlas

Section 2

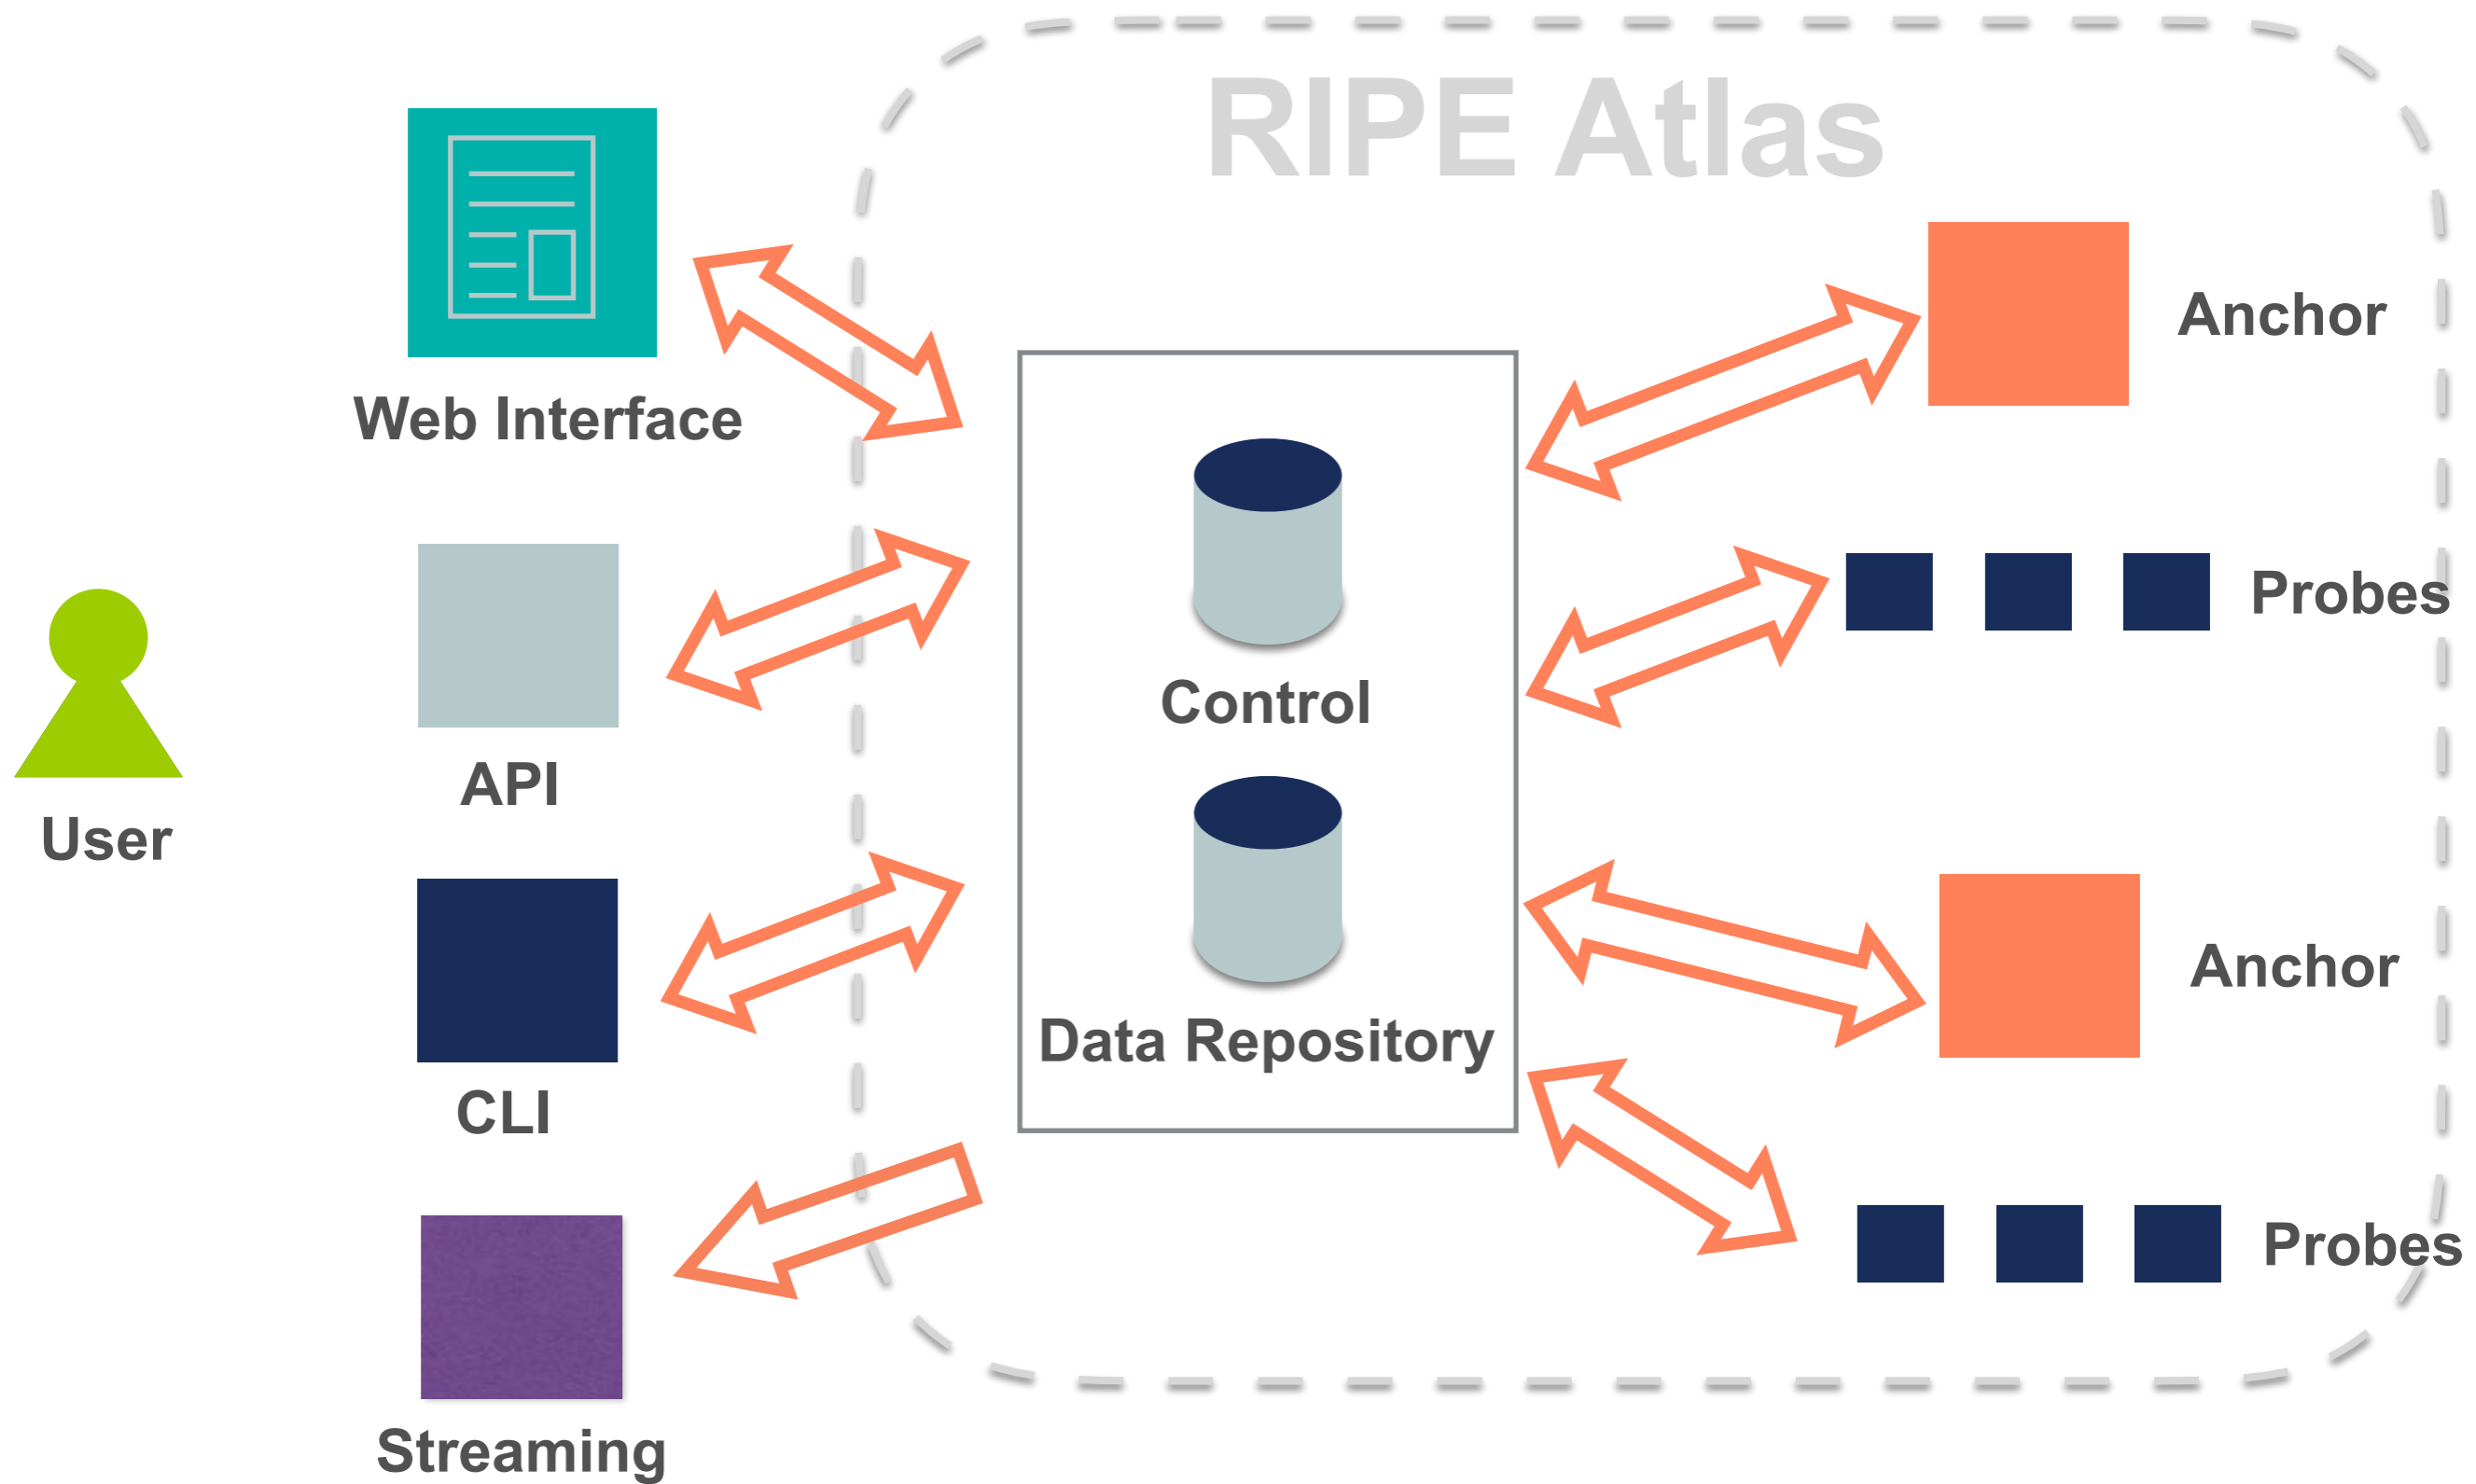

RIPE Atlas Goals

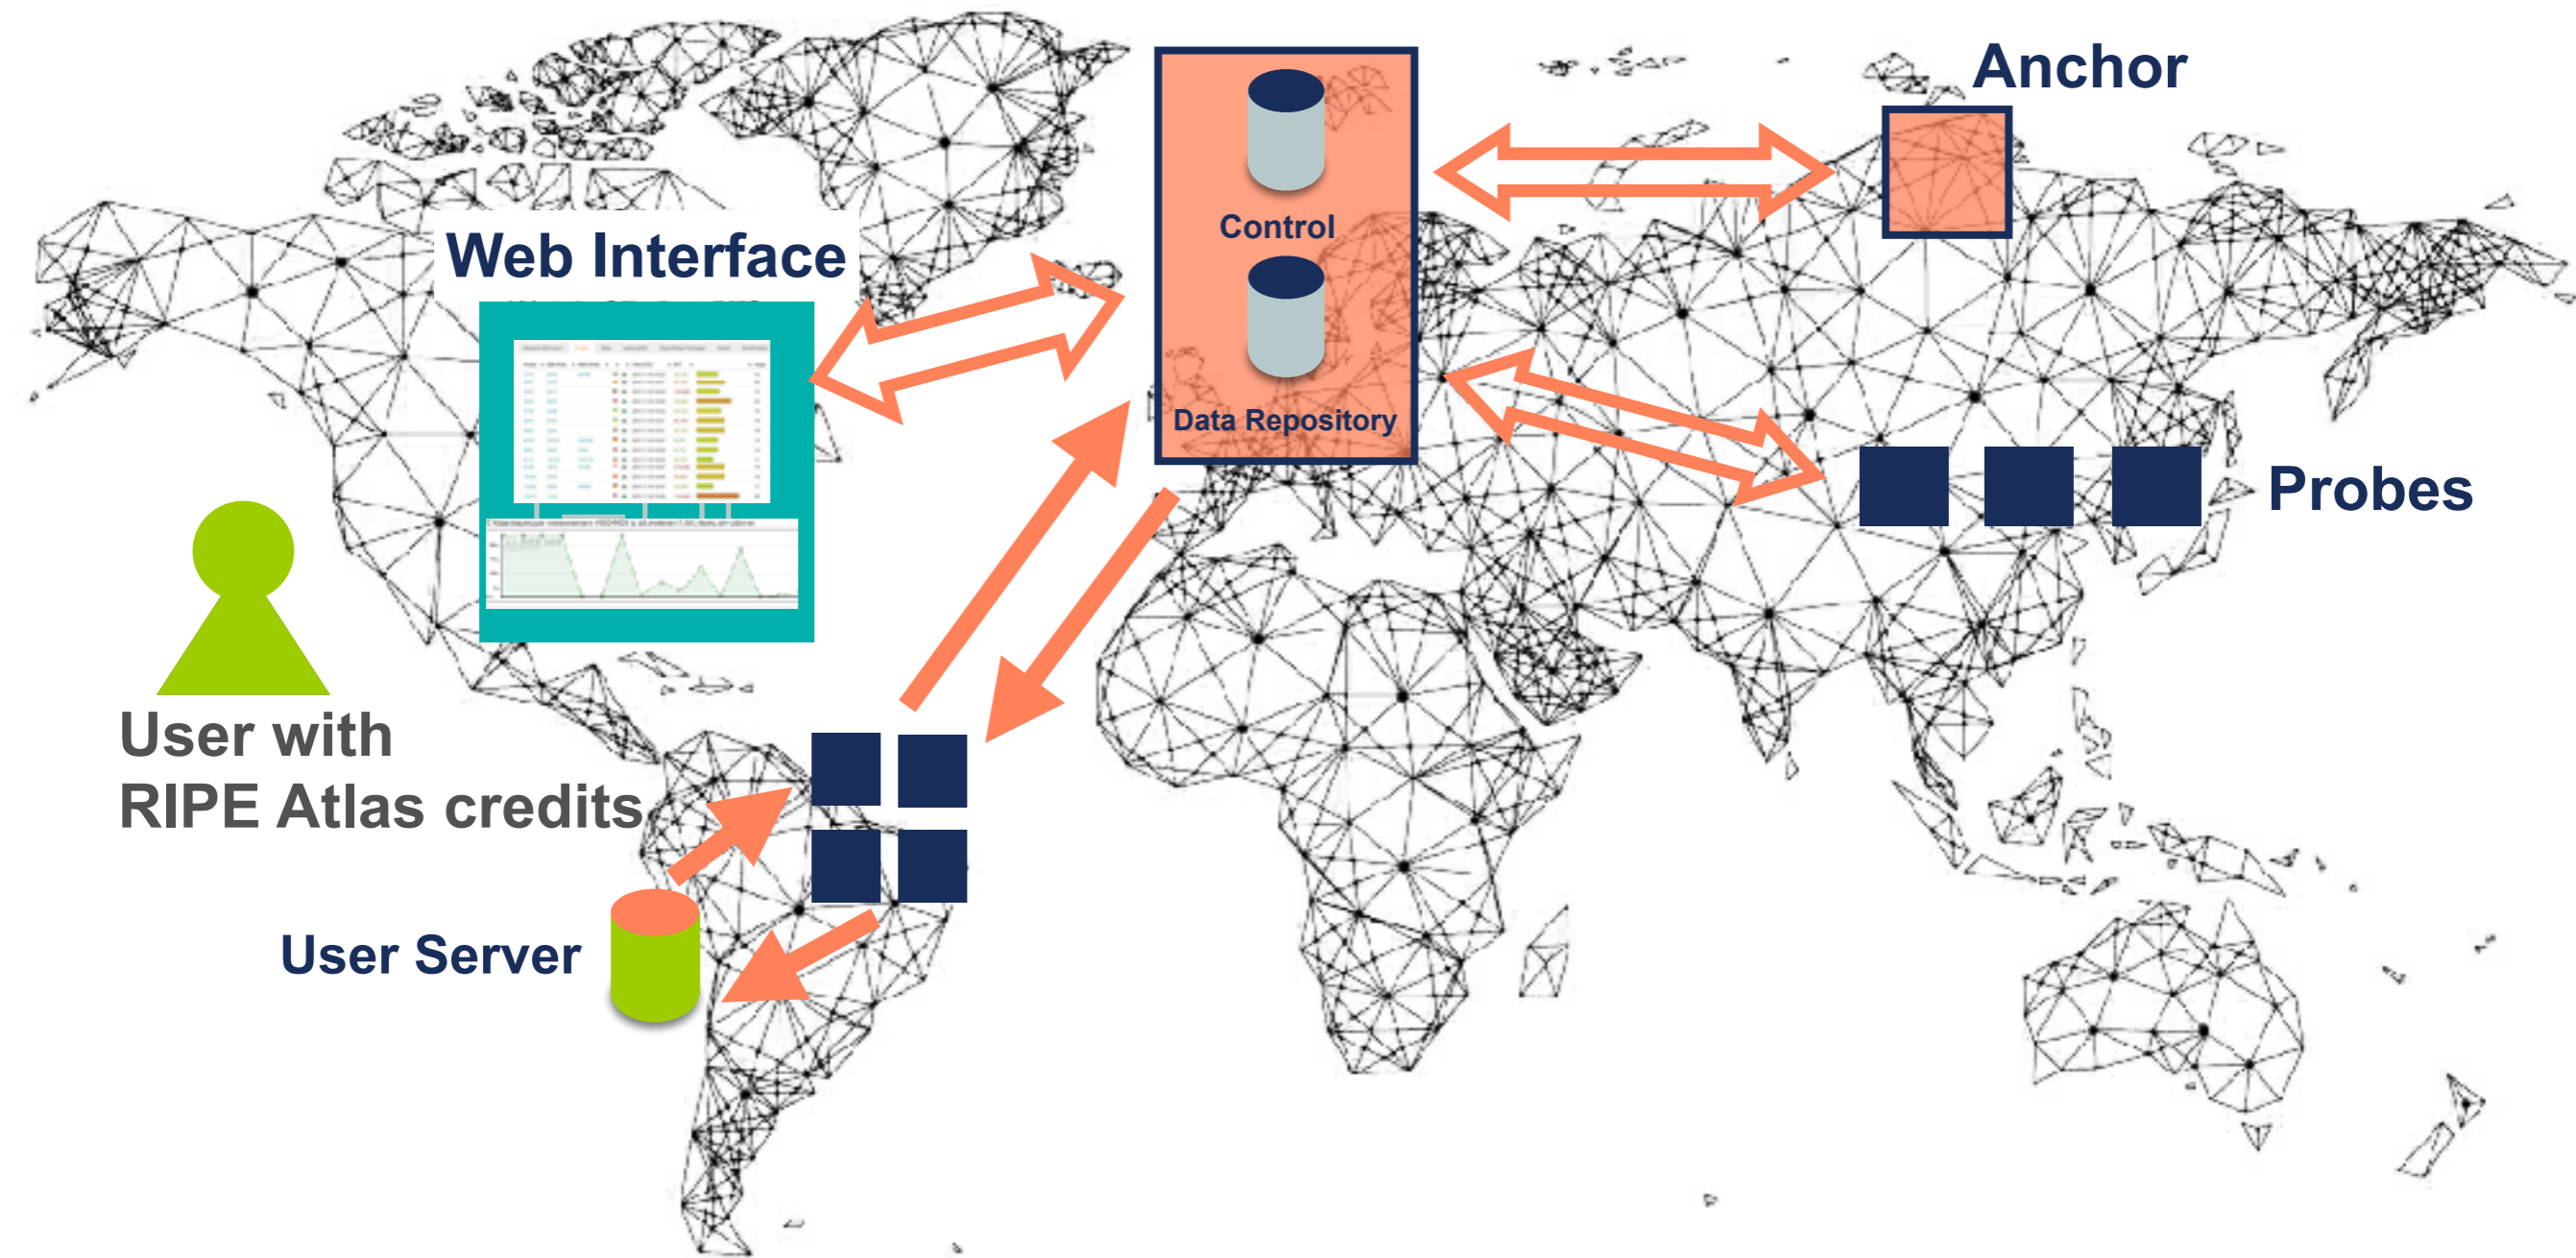

- Internet wide measurement system
 - Internet infrastructure, not all applications
- Real time & historical info
- Outbound and inbound (active) measurements
- Collaborative effort
- Open and free
- IPv4 and IPv6 capable

RIPE Atlas Overview (1)

RIPE Atlas Overview (2)

RIPE Atlas is made of...

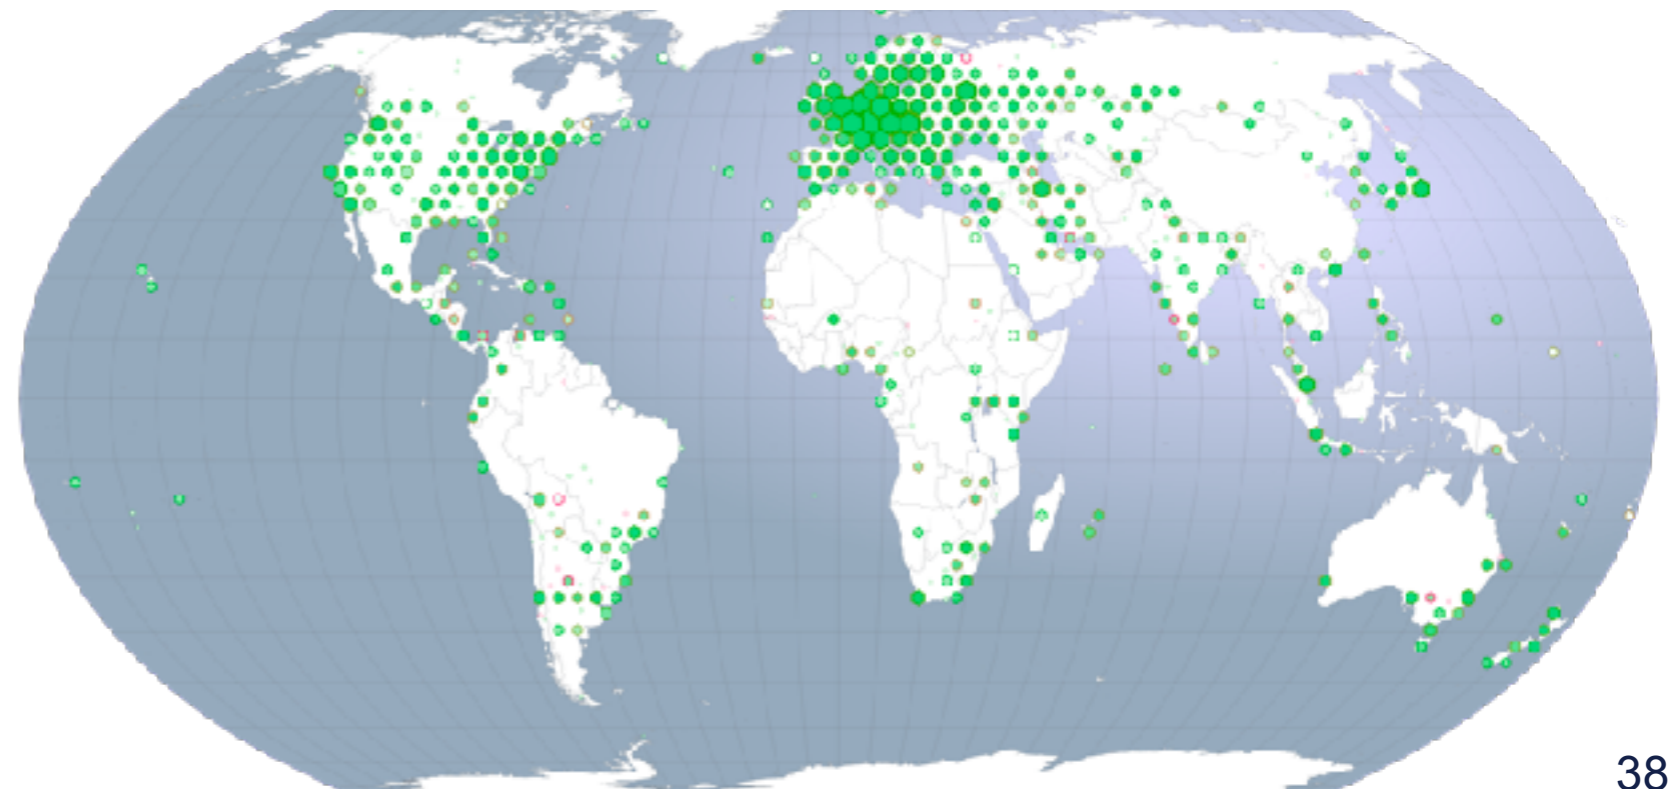

Probes

- 10200+

- Around the world

RIPE Atlas is made of...

Anchors

RIPE Atlas Anchors

Growth in the number of RIPE Atlas anchors over time

- 550+ (22 LAC)

- Around the world

RIPE Atlas is made of...

User interfaces: **Web interface / API / CLI / Streaming**

The screenshot displays the RIPE Atlas web interface. On the left is a navigation menu with the following items: RIPE Atlas (selected), About RIPE Atlas, Get Involved, Probes and Anchors, Measurements, Maps and Tools, Resources, RIPE NCC Members, My Atlas (expanded), Credits, API Keys, Messages, Ambassador Probes, and Settings. The main content area features five dashboard cards:

- Measurements:** Shows 0 measurements. Text: "You do not have any measurements. Please visit the [measurements page](#) to start one."
- API Keys:** Shows 0 API keys. Text: "You are not yet using API keys. If you'd like to start, you should visit the [API keys page](#)."
- Probes:** Shows 1 probe: AMS-Alvaro, active for 1 week, 4 days.
- Anchors:** Shows 0 anchors.
- Credits:** Shows a balance of 2101 credits, with a total of 5.3 million credits available.

RIPE Atlas is made of...

Measurements

Measurements currently running

	Built-in	User-defined			
		Total UDM	Anchoring	DNSMON	Other
Ping	41	6829	2138	0	4691
Traceroute	45	6156	2143	887	3126
DNS	158	6026	1	3548	2477
SSL/TLS Certificate	4	374	0	0	374
NTP	0	102	0	0	102
HTTP	4	2201	2139	0	62
WiFi	0	14	0	0	14

RIPE Atlas measurements

- **Built-in** global measurements towards root nameservers
 - Visualised as Internet traffic maps
- **Built-in** regional measurements towards “anchors”
- **Users** can run customised measurements
 - ping, traceroute, DNS, SSL/TLS, NTP and HTTP*

* Only towards anchors

Available visualisations: ping

- List of probes: sortable by RTT
- Map: colour-coded by RTT
- LatencyMON: compare multiple latency trends

Probe	ASN (v4)	ASN (v6)		Time	RTT
6019	3333	3333		2015-05-19 09:23	1.157
6069	59469	59469		2015-05-19 09:23	15.253
6111	198068	198068		2015-05-19 09:23	37.760
6112	197216	197216		2015-05-19 09:23	35.494
10008	3851			2015-05-19 09:23	34.664
10218	6876			2015-05-19 09:23	37.952
10246	39608			2015-05-19 09:23	36.313
10252	50288			2015-05-19 09:23	62.441
10267	12322			2015-05-19 09:23	31.498
10296	51214			2015-05-19 09:23	Unreachable

Available visualisations: traceroute

- TraceMON: network topology, latency and nodes information

- RIPE IPmap: hops geolocation on map

Security Aspects

- Probes:
 - Hardware trust material (regular server address, keys)
 - No open ports; initiate connection; NAT is okay
 - Don't listen to local traffic
 - No passive measurements
 - Automatic FW updates
- Measurements triggered by “command servers”
 - Inverse ssh tunnels
- Source code published

Ethical Considerations

- No passive measurements (no user traffic)
- Set of measurements is limited
- HTTP measurements only to Anchors
- All data is open and available to anyone
- Barrier to entry is low/cheap
- Open APIs
- Open source code on GitHub

Integration

Section 3

Preparing the lab

- Python, pip and the ripe-atlas CLI
- curl and jq commands
- How?
 - Native installations
 - Virtualbox
 - Docker

Command-line Interface (CLI) Toolset

RIPE Atlas CLI

- Open source
 - RIPE NCC led community contribution
- Documentation
 - <https://ripe-atlas-tools.readthedocs.org/>
- Source:
 - <https://github.com/RIPE-NCC/ripe-atlas-tools/>

Install RIPE Atlas tools

- Requirements for this section

- ripe-atlas-tools running

`ripe-atlas` command

- Native options

- OSX

`sudo easy_install pip`

`sudo pip install ripe-atlas-tools`

- Linux

Available from many package repositories

...or same as in OSX

Install RIPE Atlas tools

- Windows native (*experimental*)
 - Windows 7
<https://github.com/chrisamin/ripe-atlas-tools-win32/releases/download/0.1/RipeAtlasToolsSetup.exe>
 - Windows 8 and up
<https://github.com/chrisamin/ripe-atlas-tools-win32/releases/download/v0.1.1/RipeAtlasToolsSetup.exe>

Install RIPE Atlas tools

- Feel like trying Docker?
 - `docker build -t workshop-mnt github.com/aguformoso/workshop-mnt`
 - `docker run -ti workshop-mnt bash`
 - Opens a shell into your container. Don't log out from it.
- Virtualbox installation?
 - user: **participante**
 - password: **participante**

Create API Key

- Go to MyAtlas
- Click on “Create an API Key”
- Choose “permission”: “schedule new measurement”
- Careful! Time is UTC!
- Give it a label

API key creation dialogue box

- My Atlas > Create an API Key

Create API Key

UUID 5b3Ge0dc-2a95-49bc-8ffd-f1a7443e797d

Created 2016-12-08 11:09:25 UTC

Label

Valid from

Valid to

Enabled

Grants

This key won't have any effect unless you grant one or more permissions to it.

Permission	Target
✓ -- Select permission --	
credits	
Get information about your credits	
Transfer credits to another user	
keys	
List all of your API keys	
Get info about a particular API key	
Update an existing API key	
Create a new API key	
Delete an API key	
measurements	
Get results from a non-public measurement	
List your measurements	
Stop a running measurement	
Update an existing measurement	
Schedule a new measurement	
probes	
Get restricted information about a probe	

+ Add grant

Save

Configure RIPE Atlas CLI

- Create an API Key
 - <https://atlas.ripe.net/keys/>
- Configure your CLI
 - `ripe-atlas configure --editor`
 - `ripe-atlas configure --set authorisation.create=<MY_API_KEY>`

The `--help` flag

- Navigate through the available options

```
$ ripe-atlas --help
```

```
Usage: ripe-atlas <command> [arguments]
```

Commands:

<code>alias</code>	Manage measurements' and probes' aliases
<code>configure</code>	Adjust or initialize configuration options
<code>go</code>	Visit the web page for a specific measurement
<code>measure</code>	Create a measurement and wait for the results
<code>measurement-info</code>	Return the meta data for one measurement
<code>measurement-search</code>	Fetch and print measurements fulfilling specified criteria based on given filters
<code>probe-info</code>	Return the meta data for one probe

The `--help` flag

- Get sub-command-specific information

```
$ ripe-atlas measure --help
```

```
Usage: ripe-atlas measure <type> [arguments]
```

```
Types:
```

```
  dns
```

```
  http
```

```
  ntp
```

```
  ping
```

```
  sslcert
```

```
  traceroute
```

```
For extended options for a specific measurement type, try ripe-atlas measure <type> -help.
```

Fetch an existing measurement

- Fetch the measurement created previously
 - `ripe-atlas report <MEASUREMENT_ID>`
 - `ripe-atlas report 1001`

Search for probes

- Search for useful probes
 - `ripe-atlas probe-search --asn 3333`
 - `ripe-atlas probe-search --country pa`
 - `ripe-atlas probe-search --country pa --status 1`
- IPv6? Use the help menu
- Use probe tags!
<https://atlas.ripe.net/docs/probe-tags/>

Search for probes

- Show specific fields

- `ripe-atlas probe-search --asn 3333 --field asn_v6 --field country --field description --field status`

- Check the `--ids-only` flag

Create a measurement

- **ripe-atlas measure ping**

 - `--target wikipedia.org`

 - `--interval 60` (default one-off)

- **ripe-atlas measure traceroute**

 - `--target wikipedia.org`

 - `--from-area`

 - `--from-prefix`

 - `--from-country`

 - `--traceroute-show-asns`

Better Reporting

- Your measurement might involve several world-wide distributed probes
 - Difficult to debug
 - Report on specific probes

```
ripe-atlas report --probes 1,3 1001
```
 - Or group by country

```
ripe-atlas report --aggregate-by country 1001
```
 - Bonus points: discover what measurement 1001 is by using the CLI only

Status Checks

Status Checks

- Documentation (Manual)
 - atlas.ripe.net/docs/api/v2/manual/measurements/status-checks.html
- Requirements for this section
 - `curl` command
 - `jq` command

```
curl <URL> | jq <filters>
```

Status Checks

- Metrics
 - **Availability** (packet loss)
 - **Response time** (latency)
- Status Check endpoint
 - atlas.ripe.net/api/v2/measurements/<MEASUREMENT_ID>/status-check
 - Use the <MEASUREMENT_ID> created previously

Status Checks

- Check the HTTP response headers
- This allows to HEAD the service

```
$ curl -v "https://atlas.ripe.net/api/v2/measurements/23018851/status-check"
```

```
HTTP/1.1 200 OK
```

```
Server: nginx/1.12.2
```

```
Date: Thu, 03 Oct 2019 07:32:19 GMT
```

```
Content-Type: application/json
```

```
Content-Length: 133
```

```
Connection: keep-alive
```

```
X-RIPE-Atlas-Global-Alert: 0
```

```
Allow: GET, HEAD, OPTIONS
```

```
Vary: Accept, Cookie
```

```
X-Frame-Options: SAMEORIGIN
```

```
Strict-Transport-Security: max-age=15768000
```

**HTTP response header
based on the alert**

Status Checks

- Checking the response body

```
curl "https://atlas.ripe.net/api/v2/measurements/23018851/status-check" | jq
```

```
{  
  "global_alert": false,  
  "total_alerts": 0,  
  "probes": {  
    "6615": {  
      "alert": false,  
      "last": 0.245,  
      "last_packet_loss": 0,  
      "source": "Probes: 6615"  
    }  
  }  
}
```

Global alert

Per-probe alerts

Status Checks: Your service

- `<MEASUREMENT_ID>`
 - `atlas.ripe.net/api/v2/measurements/<MEASUREMENT_ID>/status-check`
- Any connectivity loss?
- Any anomalies in RTT?
- Any alerts?
- Global alert?

Status Checks: Fine-tuning

- Alerts defaults need tuning?
 - lookback
 - median_rtt_threshold
 - max_packet_loss
 - permitted_total_alerts

Status Checks: Fine-tuning

- Alerts defaults need tuning?
 - lookback
 - median_rtt_threshold
 - max_packet_loss
 - permitted_total_alerts

Status Checks: Fine-tuning

- Alerts defaults need tuning?
 - lookback
 - median_rtt_threshold
 - max_packet_loss
 - permitted_total_alerts

lookback=1

Status Checks: Fine-tuning

- Alerts defaults need tuning?
 - **lookback**
 - **median_rtt_threshold**
 - **max_packet_loss**
 - **permitted_total_alerts**

lookback=5

Status Checks: Fine-tuning

- Alerts defaults need tuning?
 - lookback
 - median_rtt_threshold
 - max_packet_loss
 - permitted_total_alerts

lookback=5

128 ms

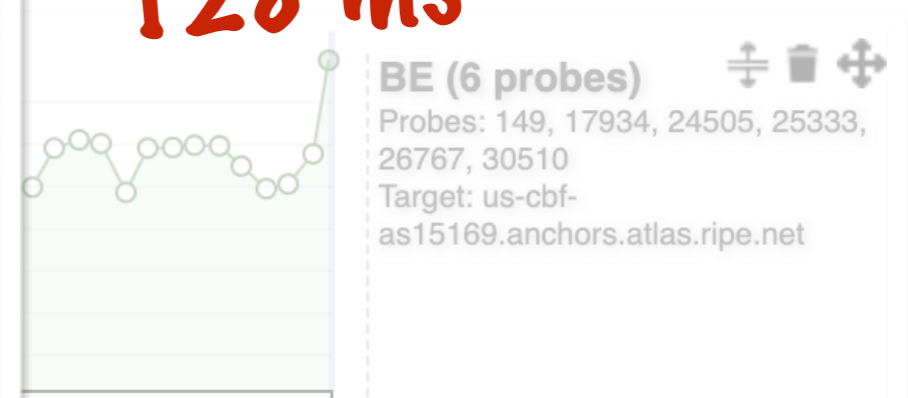

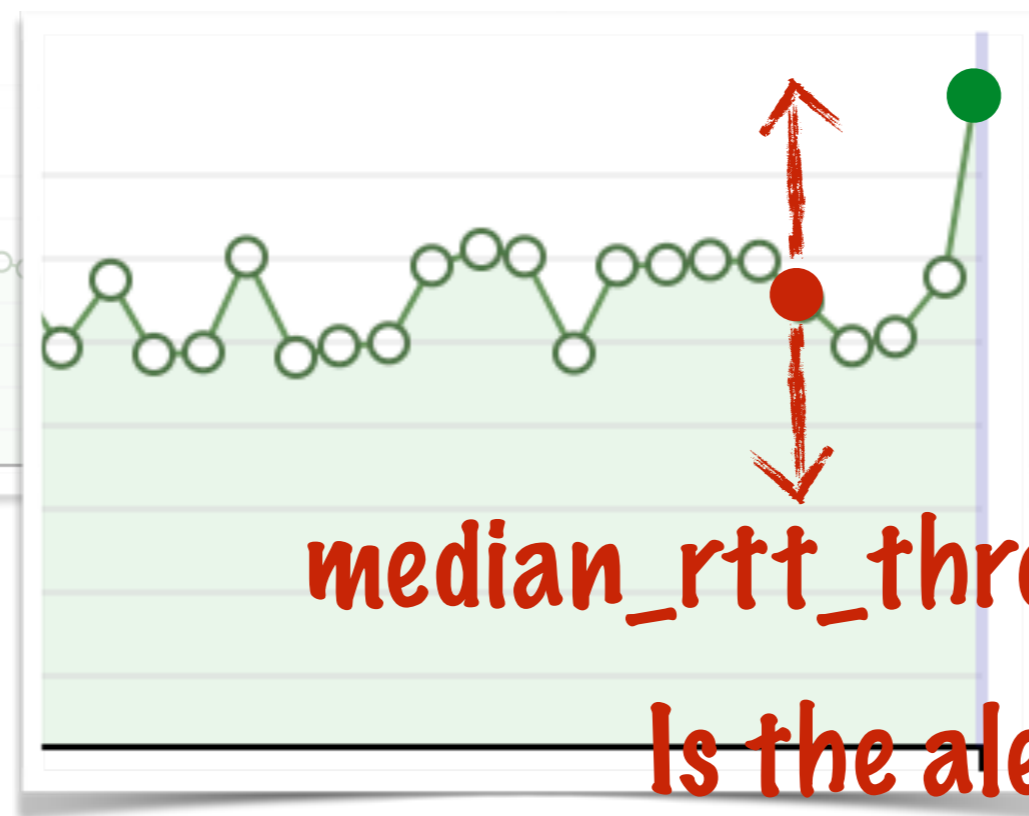

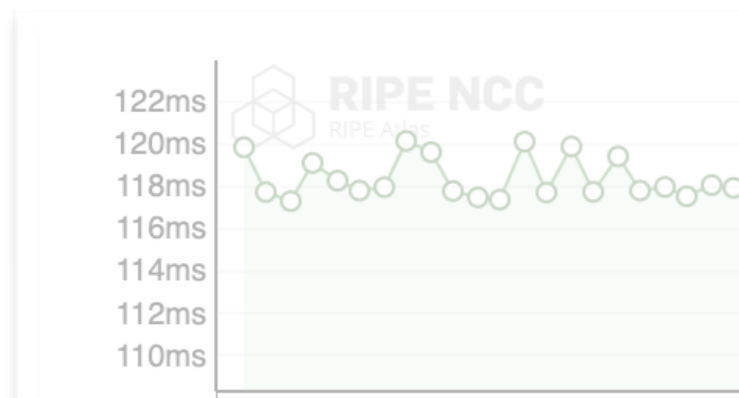

Status Checks: Fine-tuning

- Alerts defaults need tuning?
 - lookback
 - median_rtt_threshold
 - max_packet_loss
 - permitted_total_alerts

lookback=5

128 ms

median_rtt_threshold = 10%

Is the alert triggered?

Status Checks: URL parameters

- lookback
- median_rtt_threshold
- `atlas.ripe.net/api/v2/measurements/23018851/status-check`
`?lookback=10`
`&median_rtt_threshold=10%`

Status Checks: URL parameters

- `max_packet_loss`
- `permitted_total_alerts`
- `atlas.ripe.net/api/v2/measurements/23018851/status-check`
`?max_packet_loss=10`
`&permitted_total_alerts=10`

Status Checks integration

- `curl` and `jq` commands (and optionally `mail`)

```
curl "https://atlas.ripe.net/api/v2/measurements/22937039/status-check" |
```

```
jq 'select(.global_alert==true)' |
```

```
mail -s "My own Atlas integration" aformoso@ripe.net <<< "Something happened with measurement 22937039!"
```

Integration with Icinga

- Examples on [GitHub](#)
- Monitoring Integration [example](#):

```
define service {
    use generic-service
    host_name myhostname
    service_description Test_Atlas
    check_command check_http!-I atlas.ripe.net -r
    'global_alert":false' --ssl=1 -u /api/v2/measurements/1040425/
    status-check/?permitted_total_alerts=1
}
```

Streaming API

RIPE Atlas Streaming API

- Receive measurement results as soon as they are sent by the probes
 - Publish + subscribe through web sockets
- There are three types of data:
 - **Measurement results**
 - Probe connection status events
 - Measurements metadata

Streaming from the CLI

- `ripe-atlas stream --help`

```
ripe-atlas stream --traceroute-show-asns 5001
```

RIPE Atlas Streaming API

- Powerful visualisations
 - DNS root instances
<http://sg-pub.ripe.net/demo-area/atlas-stream/dns-instances.html>
- Filtering and reusing measurement results
- Documentation:
 - <https://atlas.ripe.net/docs/result-streaming/>

RIPE Atlas Streaming API

- Requirements for this section
 - Web browser with *Developer Console*
 - In Safari
 - Safari > Preferences > Advanced > *Show Develop menu in menu bar*
- Chrome or Firefox needs no reconfiguration

Steps

1. <http://atlas.ripe.net/webinar/streaming01.html>
2. Open the development console
3. Wait for results to arrive
4. Save the HTML file locally and edit the code
5. Open the edited html file in a browser and view results

Editing the HTML code

```
// Subscribe to results coming from
// all the probes involved in the measurement 19230504
socket.emit("atlas_subscribe",
  {
    stream_type: "result",

    type: "ping",

    greaterThan: {
      // out of 3 packets (or more),
      // choose the minimum (min)
      min: 100
    }

    destinationPrefix: "193/8",
    passThroughPrefix: "193/8" // only for traceroute
  }
);
```

EX1: Monitoring server reachability

- Back to our initial problem
- Are your pings still running?
- Edit streaming01.html
 - Use the **msm** parameter
 - Choose acceptable latency threshold, through the **greaterThan** parameter on **min** value
 - Notice and react when you start receiving samples

EX2: Monitoring server reachability

- Same as previous exercise, but you didn't schedule a measurement in advance
 - You don't have a measurement ID
- You want to get all the measurements reaching 167.250.112.0/24
- You can filter by **type: "http"**
 - Bonus point for hosting an Anchor!

destinationPrefix: '167.250.112.0/24'

Wrapping up

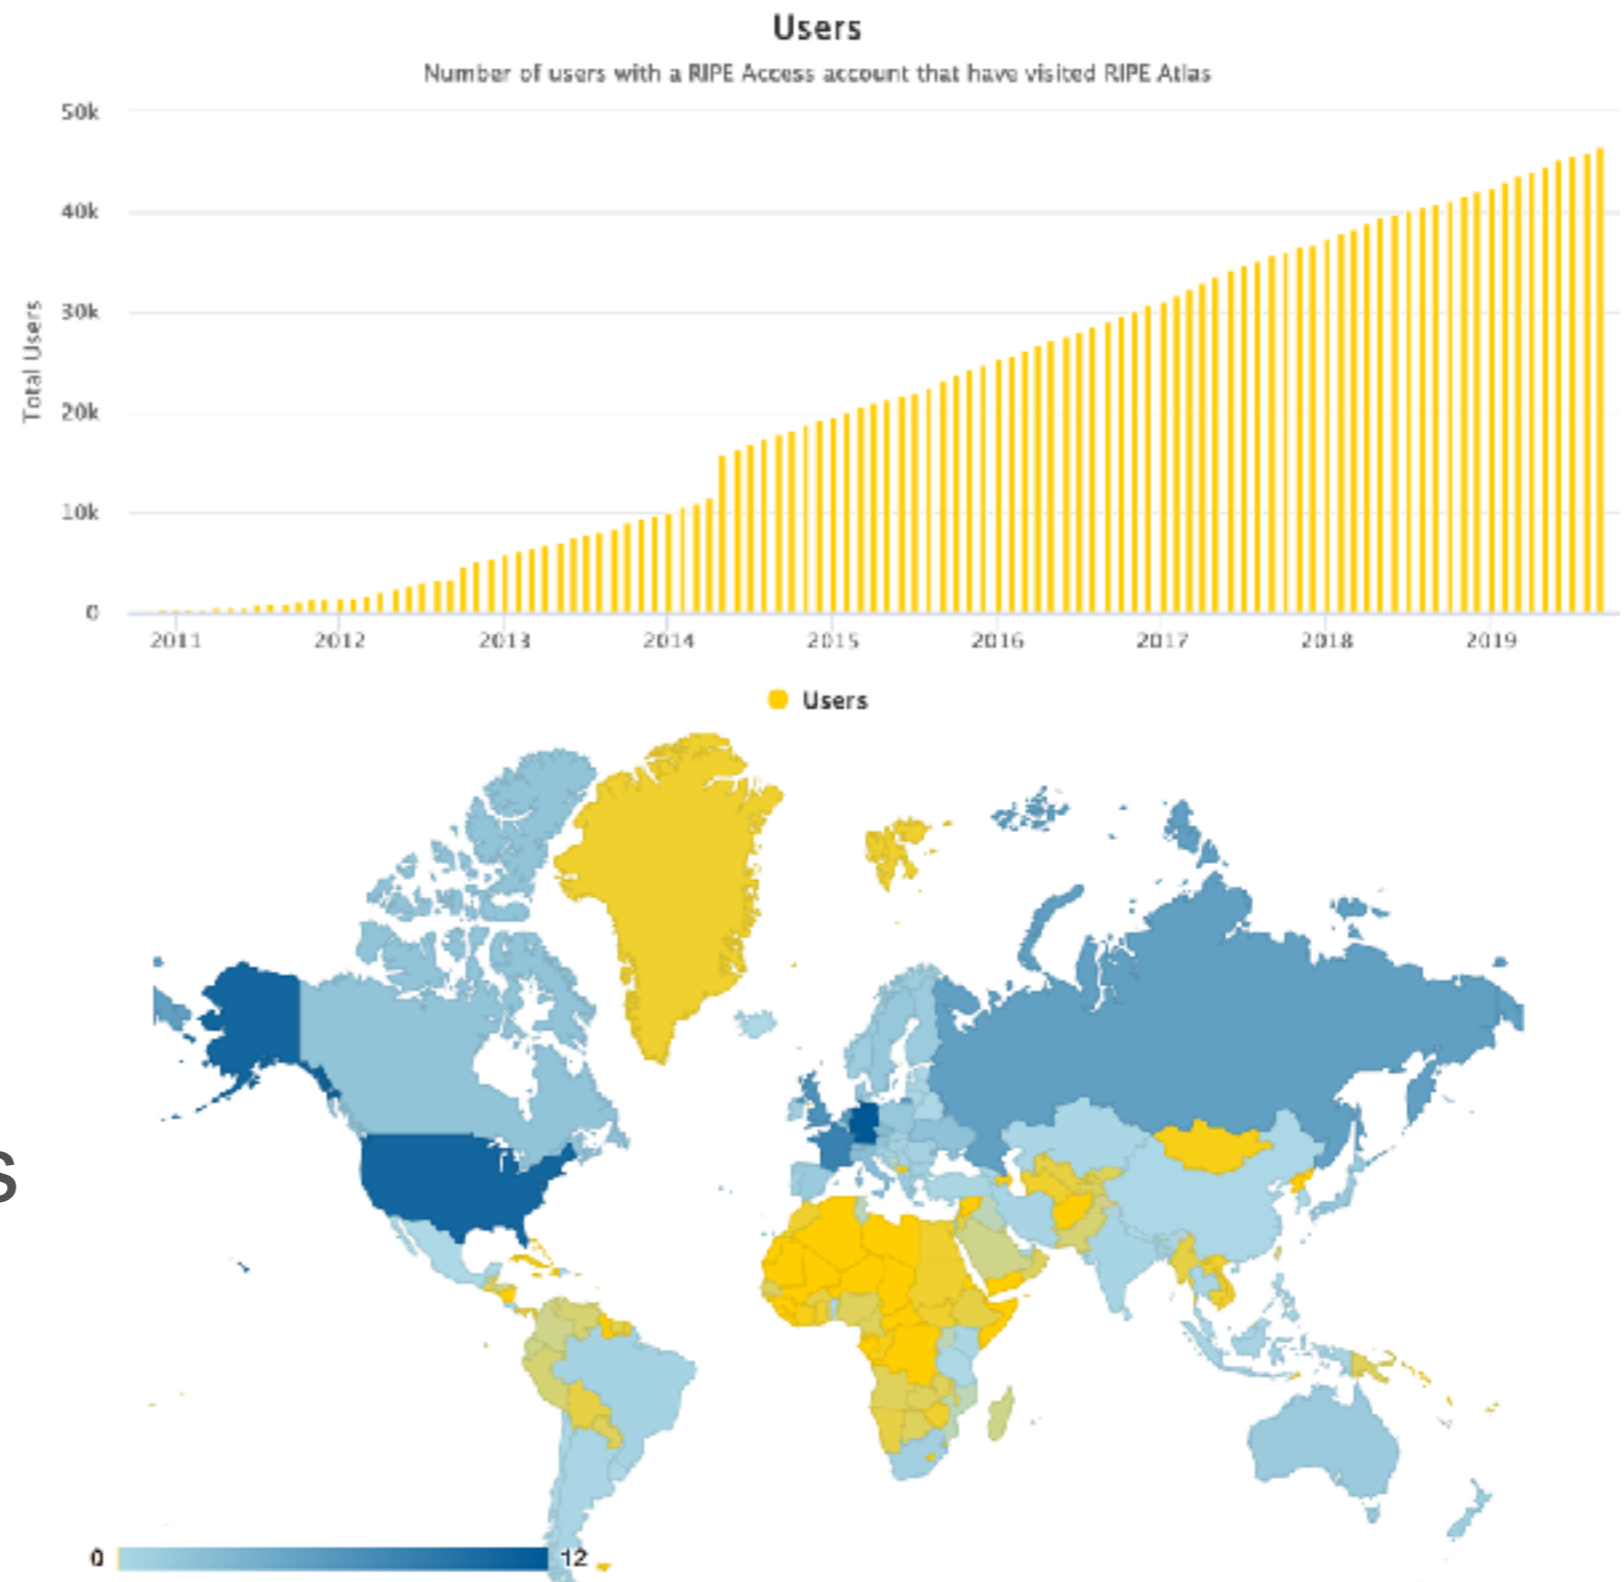

- Command Line Interface
 - Search for probes
 - Create measurements! (*stop those you don't need any longer*)
 - Use filters!
- Status Checks
 - Fine-tune your service monitors
 - Custom integrations through a simple URL
- Streaming API
 - From the CLI
 - From the browser

RIPE Atlas community

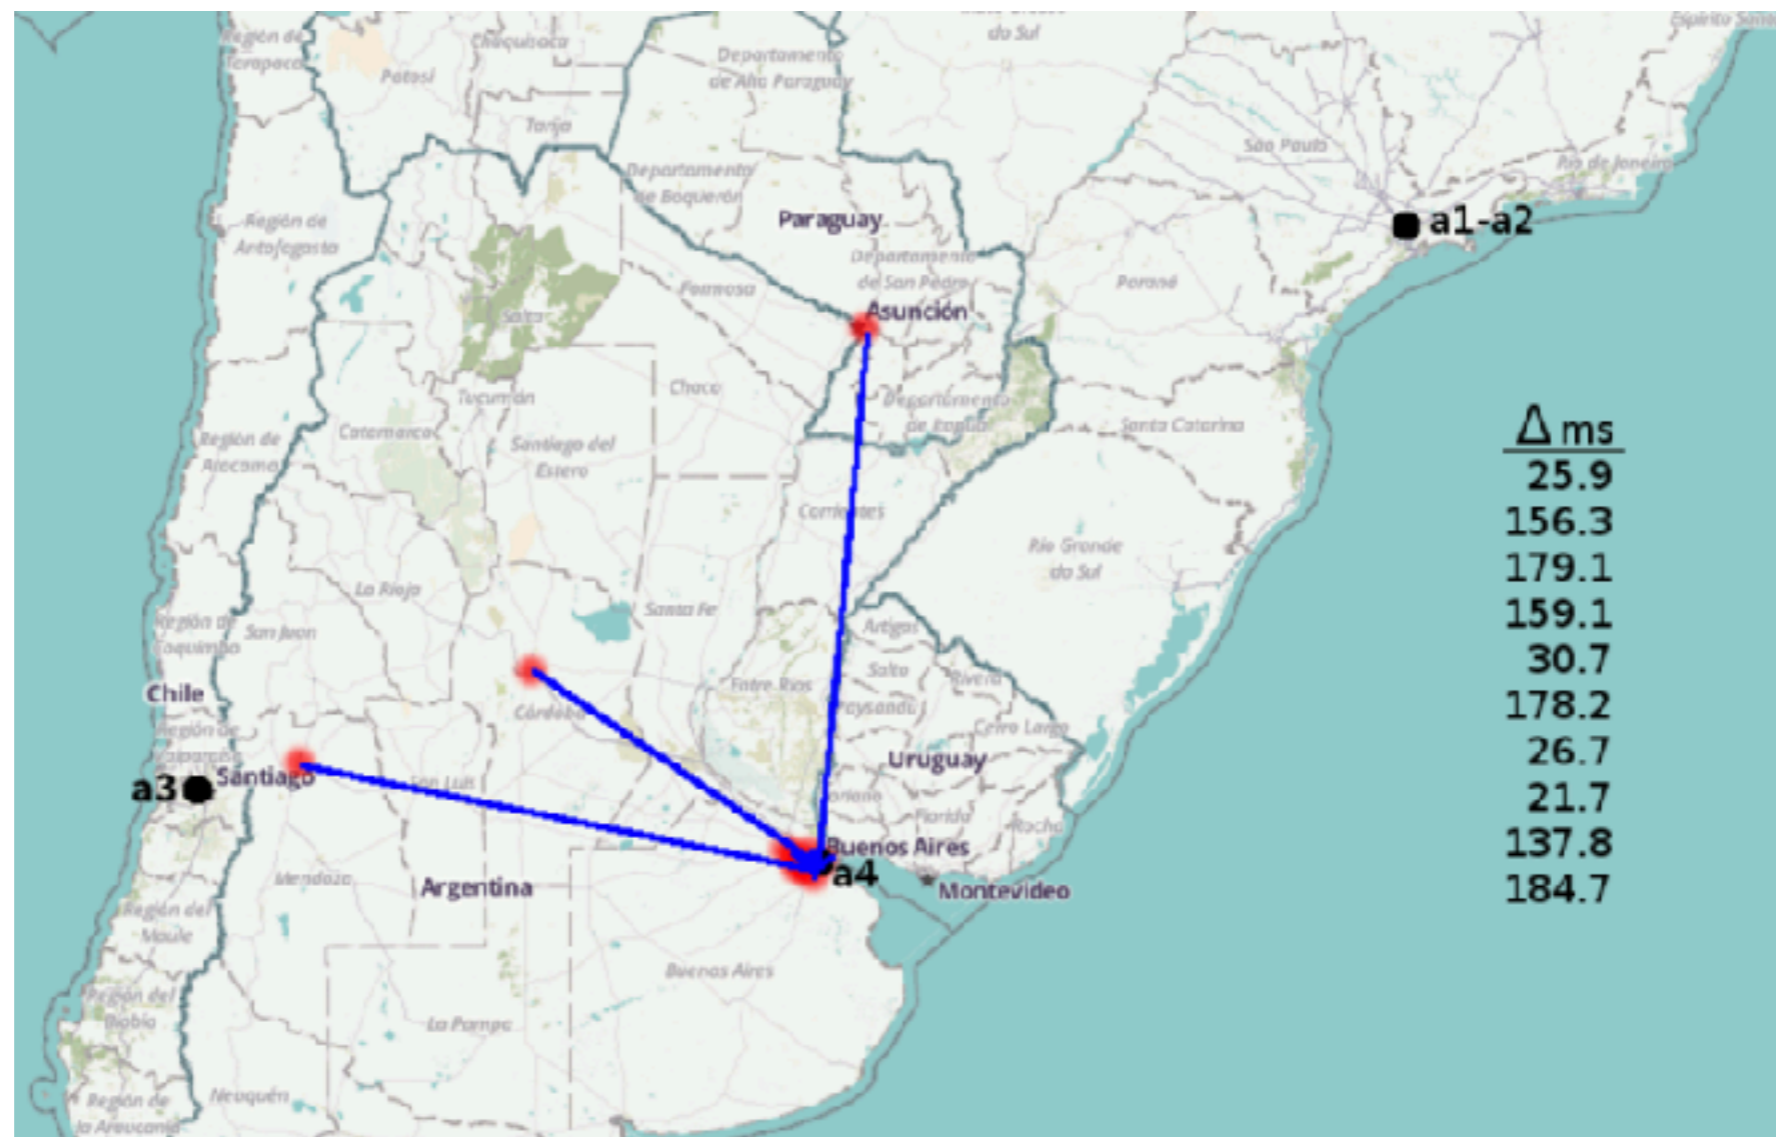

- Users
- Hosts
 - Probes
 - Anchors
- Sponsors
- Ambassadors
- Developers
- Network operators
- Researchers

What RIPE Atlas users say (part 1)

- Visualisation of a New Node in LACTLD Anycast Service (Hugo Salgado):
 - https://labs.ripe.net/Members/hugo_salgado/visualisation-of-a-new-node-in-lactld-anycast-service

What RIPE Atlas users say (part 2)

- Using RIPEstat to Analyse Cable Cuts in Chile:
 - https://labs.ripe.net/Members/hugo_salgado/using-ripestat-to-analyse-cable-cuts-in-chile

Hosting a probe

- Create a RIPE NCC Access account
- Go to <https://atlas.ripe.net/apply>
- Get a probe from a RIPE Atlas ambassador at a conference
- Available soon the software probes:
 - More news during RIPE 79 Meeting in Rotterdam

Probes in LAC

- 282 connected probes (total worldwide is 10.000+)
- Connect your abandoned probe!
 - <https://atlas.ripe.net/docs/troubleshoot-probe-issues/>

Hosting an Anchor

- Measurement targets that function as powerful RIPE Atlas probes
- Regional **baseline**
- RIPE NCC Anchoring measurements: ping, traceroute, **HTTP**
- +500 probes targeting each anchor
- 10x **more credits** than a probe

Anchors in LAC

- 22 anchors (5 are VMs) thanks to:
 - Hosting organisations
 - Sponsoring from **LACNIC**

Apply Now!

- We need more anchors in LAC; more coverage, better results!
- Now also VM anchors available
- What is required to host an anchor:
 - <https://atlas.ripe.net/get-involved/become-an-anchor-host/>
- Apply!
 - <https://atlas.ripe.net/anchors/apply/>

New: RIPE Labs Tools

- A list of prototype tools and visualisations we are currently working on
 - <https://labs.ripe.net/playground>

IXP Country Jedi

IXP Country Jedi provides visualisations of Internet traffic paths (tracertoutes) between RIPE Atlas probes located in the same country to show whether those paths take out of country detours, and what IXPs they pass through. ... [Read more](#)

RIPE IPmap

RIPE IPmap is the RIPE NCC's tool for mapping core Internet infrastructure. Through collaboration with various researchers, RIPE IPmap integrates several ground breaking methods for geolocation whilst also using crowd-sourced data to modify and correct its results.... [Read more](#)

User to User Connections

These visualisations sketch out the different ways in which end-users are interconnected within the same country. Each sketch represents a snapshot of user to user connections at a single given point in time to provide insight into how networks interconnect their users.... [Read more](#)

Contacting RIPE Atlas

- <https://atlas.ripe.net>
- Users mailing list: ripe-atlas@ripe.net
